

Highways Maintenance

Keeping the roads maintained, safe and clean in all weathers is a high profile and valued local government service.

Collective has a wide range of functions for scheduled and reactive works on the public streets and private land, including seasonal maintenance, potholes and street furniture.

Key Features

High quality, dynamic GIS mapping from your own shapefiles and web services, including ITN and MasterMap.

Planned and reactive work combines seamlessly into dynamic crew workpacks.

Mobile technology keeps crews working and service managers informed of progress.

Integrations with all major web providers and CRM systems to quickly process issues reported by citizens and colleagues.

Supervisors can monitor and locate crews in real time.

Product Benefits

Go from 'pot hole' to 'what hole?' in less time and at lower cost.

Remove paperwork and administrative time delays, responding to changing workloads quickly and automatically.

Improve the compliance of all street works and raise fines where appropriate.

Lift productivity with real-time works management and crew messaging.

Increase satisfaction by sharing transparent information about scheduled, planned and completed work on your website.
